Convergence of my overall AI interest with practical chemistry is premature. Why invest so much hardware when the planning for its use is still incomplete.

Hard analogy ... but the system is still a toy.

Use a prior theory instead of a spectrometer. Or files of spectra. Or go to NSF to buy a spectrometer.

Bennie & coll first; Get mail review also;

* Calculate the AI there more clearly in note to study section. We were pushed pretty hard on chemistry, sans Djereissi; regretted Weenit could not stay to the carbons; send Edelman our proposal sans budgets

ask Dyre to suggest more investigation of a more tractable system?
